What is a Consumer Confidence Report (CCR)?

We proudly present our Annual Water Quality Report, also referred to as a CCR. CCRs provide customers with important information regarding the quality of their drinking water. They let customers know what contaminants, if any, were detected in their drinking water, as well as associated potential health effects. We are pleased to report the results of the laboratory testing of your drinking water during the calendar year of 2023. For your Information, we have compiled a list of tables showing the testing of your drinking water during 2023.

About Us

Our Mission

Central States Water Resources is working to bring safe, reliable, and environmentally responsible water resources to every community in the U.S.

Our Vision

Central States Water Resources (CSWR) is transforming how water utilities work by using technology and innovation to quickly assess and invest in reliable infrastructure that meets or exceeds stringent state and federal safety standards, ensuring all communities across the U.S. have access to safe, clean and reliable water resources while protecting the aquifers, lakes, rivers and streams that are essential to our world.

This report contains important information about the source and quality of your drinking water. If you would like a paper copy of the 2023 Report mailed to your home, please call 1-800-670-4869 Este informe contiene información importante sobre el origen y la calidad de su agua potable. Si desea recibir una copia por escrito del informe annual de la calidad del agua del 2023, llame al número de teléfono 1-800-670-4869

About Your Drinking Water Supply

Your Water Source: Yuma Groundwater Basin within the Lower Gila River Watershed Source Water Assessment:

This public water system (PWS) did not receive a Source Water Assessment because the PWS was either inactive at the time or the PWS did not exist.

In order to ensure that tap water is safe to drink, the Environmental Protection Agency (EPA) prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may re asonably be expected to contain at least small a mounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information ab out contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

Definition of Terms

Action Level (AL): The concentration of a contaminan t which, if exceeded, triggers treatment or other requirements that a water system must follow.

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk of health. ALGs allow for a margin of safety.

Average (Avg): Regulatory compliance with some MCLs are based on a running annual average of monthly samples.

Level 1 Assessment: A study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level (MCL): The highest le vel of a contaminant that is allowed in drinking water, MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The le vel of a contaminant in drinking water below which th ere is no known or expected risk to health. MCLGs all ow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking wat er. There is convincing evidence that the addition of a disinfectant is necessary for control of microbial cont aminants.

Maximum Residual Disinfectant Level Goal (MRDL

G): The level of a drinking water disinfectant below w hich there is no known or expected risk to health. MR DLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Definition of Terms

Million fibers per Liter (MFL): A measure of asbestos

Millirems per Year (MREM): A measure of radiation absorbed by the body

Minimum Reporting Limit

(MRL): The smallest measured concentration of a substance that can be reliably measured by a given analytical method.

Not Applicable (NA): Sampling was not completed by regulation or was not required.

Not Detected (ND): Not detectable at reporting limit.

Nephelometric Turbidity Units

(NTU): Measure of clarity or turbidity of the water.

Picocuries per liter (pCi/L): Measure of the n atural rate of disintegration of radioactive con taminants in water.

Parts per billion (ppb): One part substance per billion parts water or microgram per liter (µg/L).

Parts per million (ppm): One part substance per million parts water or milligram per liter (mg/L)

Parts per quadrillion (ppq): Parts per quadrillion, or picograms per liter (pg/L).

Parts per trillion (ppt): One part substance per trillion parts water or nanograms per liter (ng/L).

ppmX1000=ppb ppbX1000=ppt pptX1000=ppq

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Sources of Contaminants

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants That May be Present in Source Water:					
Microbes	such as viruses and bacteria may come which may occur through sewage treatment plants, domesticated animals, or wildlife.				
Inorganic Chemicals	such as toxic heavy metals and salts, which come from urban stormwater runoff, industrial waste discharges, oil and gas production, mining, or farming.				
Pesticides & Herbicides	which may come from a variety of sources such as agricultural or stormwater runoff, and residential uses.				
Organic Chemicals	including synthetic or volatile organic human-made compounds, such as dry-cleaning solvents, may occur due to disposal of untreated waste into septic systems or stormwater runoff.				
Radioactive Contaminants	which can be naturally occurring or man-made may occur through weathering rock, mining, and runoff.				

Special Health Information:

Some people may be more vulnerable to contaminants in drinking water than the general population. Those who are undergoing chemotherapy or living with HIV/AIDs, transplants, children and infants, elderly, and pregnant women can be at particular risk for infections. If you have special health care needs, please consider taking additional precautions with your drinking water and seek advice form a health care provider. For more information visit www.epa.gov/safewater/ healthcare/special.html.

Water Quality Report

The following page will display the results of your water quality

- Central States Water Resources and our Utility
 Operating Companies conduct extensive
 monitoring to determine if your water meets
 all water quality standards. The detections of
 our monitoring are reported in the following
 tables.
- Regulated contaminants not listed in this table, were not found in the treated water supply.

Water Quality Results

<u>.</u>								
2023 Water Quality Test Results								
Lead and Copper	Violation Y or N	Date Sampled	# Sites Over AL	Action Level (AL)	MCLG	90th Percentile	Likely Source of Contamination	
Copper (ppm)	N	9/28/2021	0	1.3	1.3	0.016	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.	
Inorganic Contaminants	Violation Y or N	Date Sampled	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Likely Source of Contamination	
Arsenic (ppb)	Y	2023	19	17-20	0	10	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes	
Barium (ppm)	N	05/25/2021	0.025	0.025-0.025	2	2	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.	
Fluoride (ppm)	Y	2023	4	0-4.68	4	4	Erosion of natural deposits; Water addititve which promotes strong teeth; Discharge from fertilizer and aluminum factories.	
Nitrate [measured as Nitrogen] (ppm)	N	2023	0.22	0-0.22	10	10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deopsits.	

Health Language:

Arsenic While your drinking water meets EPA standards for arsenic, it does contain low levels of arsenic. EPAs standard balances the current understanding of arsenics possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humas at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Fluoride Some people who drink water containing fluoride in excess of the MCL over many years could get bone disease, including pain and tenderness of the bones. Fluoride in drinking water at half the MCL or more may cause mottling of childrens teeth, usually in children less than nine years old. Mottling, also known as dental fluorosis, may include brown staining and/or pitting of teeth.

Water Quality Results- PFAS

Your drinking water was sampled for the presence and concentration of 29 different per- and polyfluoroalkyl substances, some known by the acronyms PFAS, PFOA, PFNA, PFHxS, PFBS, and GenX, a group of contaminants in the final stages of becoming regulated by the EPA. PFAS are man-made chemicals that are resistant to heat, water, and oil. They have been used since the 1940s to manufacture various consumer products, including fire-fighting foam and stain resistant, water-resistant, and nonstick items. Many PFAS do not break down easily and can build up in people, animals, and the environment over time. Scientific studies have shown that exposure to certain PFAS can be harmful to people and animals, depending on the level and duration of exposure.

To learn more about this group of chemicals, we encourage you to read the ADEO-provided "PFAS 101 Fact Sheet" and to visit the ADEO website at https://www.azdeq.gov/pfas-resources

* EPA is proposing a Hazard Index MCL to limit any mixture containing one or more of PFNA, PFHxS, PFBS, and/or GenX Chemicals. The Hazard Index considers the different toxicities of PFNA, GenX Chemicals, PFHxS, and PFBS. For these PFAS, water systems would use a hazard index calculation to determine if the combined levels of these PFAS in the drinking water at that system pose a potential risk and require action (Source: EPA Fact Sheet: Understanding the PFAS National Primary Drinking Water Proposal Hazard Index)

Testing

In 2023 we voluntarily tested for per- and polyfluoroalkyl (PFAS) substances. **No PFAS were detected in the treated water supply.**

Notice of Violations

2023 Violations							
Violation & Health Effects	Violation Date	Corrective Action					
Arsenic levels exceeded the Maximum Contaminant Level (MCL) throughout all of 2023. The highest level detected was 19 ppb with a MCL of 10 ppb.	2023	We intend to continue to monitor the water supply and install a centralized treatment system that will remove fluoride and arsenic. This project is expected to be underway within the next 12 months.					
Fluoride levls exceeded the Maximum Contaminant Level (MCL) thoughout all of 2023. The highest level detected was 4.68 ppm with a MCL of 4 ppm.	2023	We intend to continue to monitor the water supply and install a centralized treatment system that will remove fluoride and arsenic. This project is expected to be underway within the next 12 months.					

Health Language:

Arsenic Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system and may have an increased risk of getting cancer.

Fluoride Some people who drink water containing fluoride in excess of the MCL over many years could get bone disease, including pain and tenderness of the bones. Fluoride in drinking water at half the MCL or more may cause mottling of childrens teeth, usually in children less than nine years old. Mottling, also known as dental fluorosis, may include brown staining and/or pitting of teeth.

Please share this information with other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Cactus State is responsible for providing high quality drinking water but cannot control the variety of plumbing materials. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking.

In compliance with Federal Regulation (40 CFR Part 141 Subpart 1) CSWR finds it necessary for the health and safety of our customers to adopt lead control standards which ban the use of lead materials in the public drinking water system and private plumbing connected to the public drinking water system.

If you live in an older home or are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Reduce Your Exposure

- 1. Flush your home's pipes by running the tap before drinking the water. Residents should contact their water utility for recommendations about flushing times in their community.
- 2. Use Cold water only for drinking, cooking, and making baby formula. Boiling water does not remove lead.
- 3. Clean your aerator (screen of faucet) regularly to remove sediments, debris, and lead particles that naturally collect over time.
- **4. Use a filter** that is certified to remove lead. Regularly replace the filter as it becomes less effective after expiration. Do not run hot water through the filter.
- 5. Have a licensed plumber check your plumbing for lead-based materials

Backflow Prevention

Backflow is the unwanted reversal of flow from a customer to the water supply. This is caused by a loss of pressure in the water supply line or an increase in pressure on the customer side. Common situations where backflow occurs are water main breaks or firefighting events. These events create low pressure in the distribution system. Backpressure can cause backflow when the pressure in a building exceeds the pressure in the water supply line, causing liquid from the customer's line to move into the water supply. Backflow Prevention Devices are designed to restrict the flow of water to one direction.

Cross Connection

Cross-connections are links between a customer and the drinking water supply lines. Cross-Connections may contaminate the drinking water supply if there is a backflow event. Backflow through cross-connections are very serious and have the potential to cause serious health hazards.

Common household items requiring installation of a Backflow Prevention Device

Lawn Irrigation/Sprinkler System, Pool, Hot Tub, Fire Protection Sprinklers and Boilers

If you have any questions about Backflow Prevention or would like to notify CSWR of your Backflow Devices, please call or email: Cactus State Utility Operating Company at 1-800-670-4869 or support@cactusstateuoc.com

How to Participate

Protecting drinking water at its source is an important part of the process to treat and deliver high quality water. It takes a community effort to protect shared resources. This includes utilities, businesses, residents, government and non-profit organizations.

If you have any questions about this report or concerning your water utility, please contact Cactus State Water at 1-800-670-4869.

WHAT CAN YOU DO?

Properly dispose of pharmaceuticals, household chemicals, oils and paints.

Clean up heating or fuel tank leaks with cat litter. Sweep material and seal in bag. Check with local facility for disposal.

Clean up after your pets and limit the use of fertilizers and pesticides.

Take part in watershed activities or volunteer outreach programs.
