

*****IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER*****

Council Creek Village (TX0270014), Burnet County, TX

Maximum Contaminant Level Violation, Gross Alpha, Excluding Radon and Uranium Q1 & Q2 (January-June) 2024

The Texas Commission on Environmental Quality (TCEQ) has notified the COUNCIL CREEK VILLAGE TX0270014 that the drinking water being supplied to customers had exceeded the Maximum Contaminant Level (MCL) for gross alpha excluding radon and uranium. The U.S. Environmental Protection Agency (U.S. EPA) has established the MCL for gross alpha excluding radon and uranium to be 15 pico curies per liter (pCi/L) based on running annual average (RAA), and has determined that it is a health concern at levels above the MCL. Analysis of drinking water in your community for gross alpha excluding radon and uranium indicates a compliance value in quarter one 2024 of 114 pCi/L for EP001 and a compliance value in quarter two 2024 of 116 pCi/L..

This is not an emergency. Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.

You do not need to use an alternative water supply. However, if you have health concerns, you may want to talk to your doctor to get more information about how this may affect you.

We are taking the following actions to address this issue:

We are actively exploring solutions to address the current water supply challenges, considering options such as implementing advanced treatment or developing a new water source. We are working closely with Texas Commission of Environmental Quality (TCEQ) to monitor the situation and integrate solutions as soon as possible. Your well-being and access to clean water remain our top priority.

This notice is being sent to you by: Council Creek

Council Creek Village (TX0270014), Burnet County, TX
Maximum Contaminant Level Violation, Combined Radium Q1 & Q2 (January-June) 2024

The Texas Commission on Environmental Quality (TCEQ) has notified the COUNCIL CREEK VILLAGE TX0270014 that the drinking water being supplied to customers had exceeded the Maximum Contaminant Level (MCL) for combined radium (-226 & -228). The U.S. Environmental Protection Agency (U.S. EPA) has established the MCL for combined radium (-226 & -228) to be 5 pico curies per liter (pCi/l) based on running annual average (RAA), and has determined that it is a health concern at levels above the MCL. Analysis of drinking water in your community for combined radium (-226 & -228) indicates a compliance value in quarter one 2024 of 37 pCi/l for EPOO1 and a compliance value in quarter two of 40 pCi/l.

This is not an emergency. However, some people who drink water containing radium 226 and/or 228 in excess of the MCL over many years may have an increased risk of getting cancer.

You do not need to use an alternative water supply. However, if you have health concerns, you may want to talk to your doctor to get more information about how this may affect you.
