

**IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER**  
**San Pedro Village (TX2330046), Cameron, TX**  
**Lead Treatment Technique Requirements Not Met 10/17/2024 to 01/13/2025**

Our water system recently violated a drinking water requirement. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did to correct this situation.

We did not complete the following requirement(s): The violations were issued by the Lead and Copper Monitoring Team due to either late, inadequate, or no submission of the Lead Service Line Inventory that was due 10/16/2024.

There is no safe level of lead in drinking water. Exposure to lead in drinking water can cause serious health effects in all age groups, especially pregnant people, infants (both formula-fed and breastfed), and young children. Some of the health effects to infants and children include decreases in IQ and attention span. Lead exposure can also result in new or worsened learning and behavior problems. The children of persons who are exposed to lead before or during pregnancy may be at increased risk of these harmful health effects. Adults have increased risks of heart disease, high blood pressure, kidney or nervous system problems. Contact your health care provider for more information about your risks.

**What should I do?**

There is nothing you need to do at this time. You may continue to drink the water. We will notify you within 24 hours if a situation arises where the water is no longer safe to drink.

**We are taking the following actions to address this issue:**

On January 13, 2025, CSWR – Texas completed and submitted the initial Lead Service Line Inventory. The majority of service lines in this community were found not to contain lead. However, a small number of service lines were classified as unknown due to incomplete information. Over the next several years, CSWR – Texas will continue working to identify the exact material of each service line in accordance with the Revised Lead and Copper Rule (40 CFR parts 141 & 142). If your service line is found to contain lead and requires replacement, you will be notified directly.

To check the status of your service line, please visit:
