

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER
Flag Creek Ranch (TX1500112), Llano County, TX
Maximum Contaminant Level (MCL) Violation, Q2 (Apr - June) 2026

The Texas Commission on Environmental Quality (TCEQ) has notified the FLAG CREEK RANCH TX1500112 that the drinking water being supplied to customers had exceeded the Maximum Contaminant Level (MCL) for total trihalomethanes (TTHMs). The U.S. Environmental Protection Agency (U.S. EPA) has established the MCL for total trihalomethanes to be 0.080 milligrams per liter (mg/L) based on locational running annual average (LRAA), and has determined that it is a health concern at levels above the MCL. Analysis of drinking water in your community for total trihalomethanes indicates a compliance value in **quarter two 2026 of 0.082 mg/L** for DBP2-01 (trihalomethanes).

Trihalomethanes are a group of volatile organic compounds that are formed when chlorine, added to the water during the treatment process for disinfection, reacts with naturally-occurring organic matter in the water. Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidney, or central nervous systems, and may have an increased risk of getting cancer.

What should I do?

You do not need to use an alternative water supply. However, if you have health concerns, you may want to talk to your doctor to get more information about how this may affect you.

We are taking the following actions to address this issue:

CSWR – Texas Utility Operating Company (UOC) will increase distribution system flushing to reduce the age of water, which will lower the formation of Disinfectant by Products, like TTHMs.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (i.e., people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
